

ITMD 562-Assignment 1

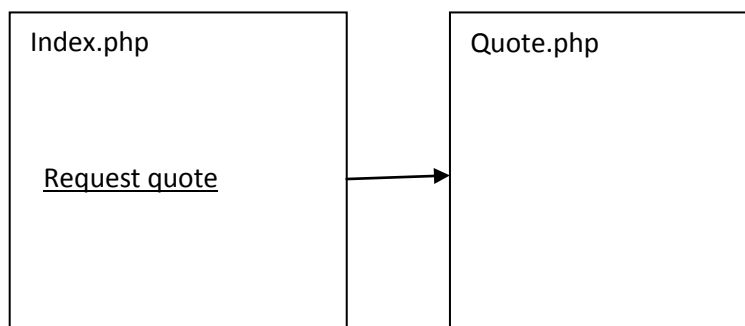

Name: Sanjyoti Patil

CWID: A20332642

USER Interface:

- 1) Firstly, the **index.php** page will be displayed, which has details about company. “Reliable Repair” is a small appliance repair company. They charge customers by the hour to repair electronic equipment such as toasters, blu-ray players and televisions. This page will display the shop timings like opening and closing hours. This will also show drop off time. This occurs when shop is open for more than 6 hours and last drop off time is 3 hours before closing time. Page will also mention company address as well as direction map.
- 2) When customer will click onto “Request a quote” it will redirect to **quote.php**. This page will have calendar for current month indicating store timings. Customer can also calculate Quote
 - Select day when store is open for more than 6 hours.
 - Select application type.
 - Select drop off day and also show drop off timing.
 - Pick up day contains list of all day.Click on submit to calculate the values.

Navigation flow:

Folder Structure

src

- css
- img
- js
- index.php
- quote.php

Testing

- 1) The pages has been developed and tested on my local machine Windows 7, 64 bit running Apache 2.4.9 with PHP 5.5.12
- 2) Browser Chrome 37.0
- 3) My Laptop resolution 1366*768

Future Enhancement

- 1) By using more prominent css and images this pages can be made more attractive.
- 2) We can add more complex structure for pages by using php.
- 3) After submitting quote the flow can be rendered to different pages.
